

User Setup Instructions for FI-IHR-F (React + SWC frontend)

0. Clone the repository

```
git clone https://github.com/Fiti-git/FI-IHR-F.git
cd FI-IHR-F
```

1. Install Node.js and npm

- Download and install the latest **Node.js** (which includes npm) from: <https://nodejs.org/en/download/>
- Verify installation:

```
node -v
npm -v
```

2. Install dependencies

Inside the project folder (`FI-IHR-F`), run:

```
npm install
```

This will install all required packages listed in `package.json`.

3. Run the development server

To start the React app with SWC compilation and hot reload:

```
npm start
```

- By default, the app will open in your browser at <http://localhost:3000>
-

4. Build the production version

When you want to build optimized production files:

```
npm run build
```

The build output will be in the `dist/` or `build/` folder (depending on the setup).

5. Additional tips

- Make sure your backend API (`FI-IHR-B`) is running if your frontend calls any API endpoints.
- To customize SWC config, check files like `.swcrc` or `package.json` scripts.
- Use your preferred code editor like VSCode with React and ESLint plugins for best experience.
